

### **Watch for Thin Ice**

Elk Island Public Schools, along with our community partners, want to remind families about the dangers of thin ice during this time of year. Depending on changing temperatures, ice can form and melt to varying degrees on outdoor bodies of water. Please remind your children about the dangers of thin ice, to obey all posted signs and to take the proper care to remain a safe distance from the ice.

For more information on ice safety, visit [www.lifesaving.org](http://www.lifesaving.org).

### **Did you know?**

The way ice forms affects the way it melts in spring. Minerals in the water actually become concentrated in vertical veins throughout the ice as it freezes. Warm temperatures cause these veins to melt more quickly and weaken the ice, a process known as *candling*.
